SKILLS

React, HTML5, CSS3, Tailwind CSS, MySQL, PostgreSQL, MongoDB Atlas (NoSQL), Routing, Switching, VLANs, OSPF (CCNA 1-3 fundamentals), Git/GitHub, Postman API Testing, DSA, OOP, LangChain, Generative AI (LLM Fundamentals), Prompt Engineering, LangChain Agents, Conversational Memory, LLM Tool API Integration, OpenAI API, Streamlit, Cs. Technical Writing, Interviewing, Docker, Kubernetes, DevOps, AWS, Azure, GCP

PROFESSIONAL EXPERIENCE

Remote Cisco Networking Academy | May to July 2026

- **Architected** NetSage AI as the internship capstone in a **2-3 member** team.
- NetSage AI uses symptom reports to diagnose wireless, **VLAN, DHCP, DNS**, routing, **ACL, NAT**, and other network faults. show-command evidence, improving service triage.
- Used **33 test cases** from **eight fault categories** to validate the dashboard while a teammate used the AI diagnosis and prompt layer.

EDUCATION

Associate of Science in Computer Science & Engineering | CGPA - 7.37

Kalinga Institute of Industrial Technology — Bhubaneswar | Jul 2027

PROJECT EXPERIENCE

Real-Time Collaborative Whiteboard [Live Demo](#)

- Engineered a **vanilla JavaScript** whiteboard application without external drawing libraries, emphasizing clean programming and maintainable code.
- Improved **maintenance and versioning** by organizing the codebase into **six modular** files containing **790 lines of code** each.
- Improved the user experience by implementing five core features, including a multi-colour pencil, an adjustable-size eraser, sticky notes, image insertion, and board export, supporting an **asynchronous** browser-based workflow.
- Added five essential interactive features to support a comprehensive browser-based drawing workflow: a **multi-color pencil**, an **adjustable-size eraser**, **sticky notes**, **image insertion**, and board export..

Faculty Review System (login system was added specifically to demonstrate security implementation skills) [Live Demo](#)

- Built a full-stack faculty review platform in a 2-member team, owning the FastAPI backend service, frontend, and PostgreSQL database design, with **8 active REST APIs** and **2 database tables**.
- Designed **8 active REST APIs** for review submission and retrieval with a focus on clean framework integration and service reliability.
- Added **JWT-based authentication**, email verification, token verification, and ownership checks across **5 frontend pages** to prevent duplicate or fraudulent reviews and strengthen maintenance of platform integrity.

Languages - Java, Python, JavaScript, SQL
